

Lumy for iPhone, Apple Watch,

Lumy for iPhone & Apple Watch 4.5 is available now on the AppStore as a free update to the existing users. Lumy is a feature-rich app for anyone who wants to track the sun and moon for their day-to-day activities. It was featured by Apple on its fall keynote for its beautiful watch face design.

Earlier, Lumy was focused solely on the photographers, with emphasis only on the golden hour. With this update, Lumy goes beyond photography.

Who is Lumy for?

- Photographers who are tired of missing the Golden Hour and Blue Hour.
- Fitness enthusiasts who schedule their fitness / yoga sessions at sunrise or sunsets.
- Everyone else who needs sun and moon information for their outdoor activity.
- People who don't want to take their iPhone with them and would prefer to take advantage of Lumy's standalone Apple Watch app.
- People who live in the apple ecosystem and needed to access sun and moon information in all the places they can - iPhone, iPad, Apple Watch, Apple TV, and even HomePod.
- Anyone who appreciates a well-designed sun & moon tracking app that uses natural gestures and supports accessibility features including VoiceOver and Dynamic Type.

Using Lumy, People can:

- Check the time of Golden Hour and Blue Hour to help them capture the perfect shot.
- Check when the next full moon will be.
- Check when the sun and moon will rise, set, and more.
- Ask Siri, "Is the moon above the horizon?" "When is next full moon day?", "When is Golden Hour?" and similar questions – even from a HomePod.
- Set up the perfect Lumy Apple Watch experience using custom complications.

- Use an Apple TV and Photo Frame mode to put Lumy onto the big screen in an office or home.
- Build shortcuts using data from Lumy. See information for the current location or anywhere else in the world.
- The possibilities are endless. If it involves the moon or sun, Lumy can do it.

What's New for iPhone & iPad
