

Lumy for Apple TV

Lumy for Apple TV 4.0 is now available on the AppStore as a free update to the existing users. Lumy was featured by Apple on its fall keynote for its beautiful watch face design. This update brings those pretty designs to the new Apple TV 4K.

Lumy on iPhone and Apple Watch is a beautiful app for photographers and everyone who wants to track the sun and moon information for their day-to-day activities. Lumy for Apple TV takes that information and transforms them into a lovely photo frame to enlighten the living room.

With the all-new photo frame mode, users can now mount sun and moon information as an elegant piece of art hanging in a museum. Photo frame mode is highly customizable. Users can use their Siri Remote to switch between sun/moon information and change the photo frame styles.

With the support for universal purchase, users can enjoy lumy on their iPhone, iPad, Apple Watch, Apple TV, HomePod with a single purchase on the AppStore.

- Users can use their current location or any place around the world.
- Lumy doesn't require an internet connection.
- Localized in Chinese, Japanese, French, German.
- App Price: US \$4.99.
